The video shows the solution for a math problem involving a system of linear equations. The first equation is $x + y = 10$ and the second equation is $2x - y = 4$. The solution involves adding the two equations to eliminate y , resulting in $3x = 14$, which gives $x = \frac{14}{3}$. Substituting this value back into the first equation yields $y = 10 - \frac{14}{3} = \frac{16}{3}$. The final solution is $(\frac{14}{3}, \frac{16}{3})$.
