Introduction to Analysis by Maxwell Rosenlicht is another bargain from Dover Publications. I used this inexpensive mathematics reprint to help fill in gaps in my background before tackling more advanced mathematics. I found the first 150 pages to be challenging, but manageable. I had less success with the last 100 pages.

9a. Instead of the obvious solution, here is a very nice solution that one of you handed in. The function  $f(x) = p x$  is strictly increasing from the interval  $[0;1)$  onto the interval  $[0;1)$ . By Exercise 4 in this set of exercises from Rosenlicht (our Exercise 3), it is continuous. 9b. Let  $g(x) = (x i 1)=(p x i 1)$  for  $x \neq 1$  and let  $f(x) = p x + 1$ . By

This text is a tremendous accompaniment to Baby Rudin (this book along with Apostol's Mathematical Analysis (buy it used) will take you over the hump in a real analysis class using Rudin). Also, Rosenlicht taught at a time when real analysis was presented using diagrams - a pedagogical tool that has fallen out of some favor.

In analysis, we usually prove inequalities, and we prove those inequalities by estimating. To illustrate the point, consider the following statement. Let  $x$  be a real number. If  $x < \epsilon$  is true for all real numbers  $\epsilon > 0$ , then  $x = 0$ . This statement is the general idea of what we do in analysis. Suppose next we really wish to prove the equality  $x = 0$ .

is not so much about solving particular problems but teach you the language of analysis. Among the topics to discuss are elementary set theory, the real numbers, metric spaces, continuous functions as well as differentiation and integration. The course is based on the text 'Introduction to Analysis' (IA) by Maxwell Rosenlicht,
