Then Zika virus cases increased exponentially in 2015. Preliminary investigations indicated mother-to-child transmission among pregnant women, and a case of sexual transmission was confirmed. Each time researchers learned new information, case definitions had to be adapted and the focus of information gathering had to expand to account for multiple transmission modes.

The link between congenital cataracts and maternal rubella infection was first made in 1941 by an Australian ophthalmologist, Norman Gregg, who had noticed an unusual number of infants with cataracts following a rubella epidemic in 1940. In the absence of vaccination, rubella was an endemic disease with epidemics occurring every 6–9 years. If rubella infections occurred among nonimmune ...

The Wt/Ht tables were used for many years as a reference for population-based studies. If a person's Wt/Ht was 20% above or below the mean for that height category, he/she was considered to be overweight or underweight, respectively. The insurance data also indicated the ratios of weights for heights (the term used was "body build") at which mortality was lowest in adults. The latter was ...
