Early problem-solving research proposed the 'general problem solver model.' In this model the solution of a problem is conceptualized as a movement between two states: a starting state, named 'problem space,' and a final state named 'goal state' . There are 'rules of transition' which refer to those functions that move the system from one state to another, and there are also ...

The problem-solving model, introduced below, incorporates an effective set of skills into a step-by-step process. The model combines the use of statistical tools, such as control charts and process flow diagrams, with group problem-solving skills, such as brainstorming and consensus decision-making. The statistical tools help us make data-based decisions at various points throughout the model ...

Secondly, the social problem-solving model provides a research-based, step-by-step method. When followed, this method progressively builds the skills needed to solve social problems, from clear definition of the problem; through brainstorming solutions; to choosing, applying, and verifying a solution. In this method, social problems are addressed directly and constructively, rather than ...

In this paper we present a minimal, self tuning scalar field model that can dynamically cancel a large quantum vacuum energy, avoiding Weinberg's No Go Theorem, and produce accelerated de Sitter expansion at a lower energy scale as a solution to the problem. Our minimal model, which contains a non canonical kinetic energy and a linear potential, belongs to the Kinetic Gravity Braiding subclass ...
