**Learn Think And Predict Though** is scikit's classifier.predict() using 0.5 by default?. In probabilistic classifiers, yes. It's the only sensible threshold from a mathematical viewpoint, as others have explained. What would be the way to do this in a classifier like MultinomialNB that doesn't support class\_weight?. You can set the class\_prior, which is the prior probability  $P(y)$  per class  $y$ .
