VLAN Trunk Protocol (VTP) reduces administration in a switched network. When you configure a new VLAN on one VTP server, the VLAN is distributed through all switches in the domain. This reduces the need to configure the same VLAN everywhere. VTP is a Cisco-proprietary protocol that is available on most of the Cisco Catalyst series products.

An Entry clone contains your gene of interest flanked by attL sequences, which are then used to recombine with attR sequences to create your desired expression clone. There are three methods you can use to produce an Entry clone: BP cloning, restriction enzyme and ligase cloning, and Invitrogen

Knowing the IP address of the default gateway (usually a router) on a home or business network is important information to successfully troubleshoot a network problem or gain access to the router's web-based management. In most cases, the default gateway IP address is the private IP address assigned to the router. This is the IP address that the router uses to communicate with a local home network.

Gateway technology relies on the two reactions described below: The BP Reaction takes place between the att B sites flanking the insert and the att P sites of the donor vector. This reaction is catalyzed by the BP Clonase enzyme mix and generates the entry clone containing the DNA of interest flanked by att L sites.
