Vinegar is a dilute solution of acetic acid ($\text{HC}_2\text{H}_3\text{O}_2$), produced by bacteria during fermentation. Related: Does salt make water boil faster? "Baking soda is the opposite of vinegar.

Why are vinegar and baking soda so good for cleaning?

Aromatic Rings. Aromatic rings (also known as aromatic compounds or arenes) are hydrocarbons which contain benzene, or some other related ring structure. Benzene, C_6H_6 , is often drawn as a ring of six carbon atoms, with alternating double bonds and single bonds. This simple picture has some complications, however. (Everything in organic chemistry has complications!)

The electron or arrow pushing method is often used in illustrating a reaction mechanism; for example, see the illustration of the mechanism for benzoin condensation in the following examples section. A reaction mechanism must also account for the order in which molecules react. Often what appears to be a single-step conversion is in fact a multistep reaction.
