Coastal Designs & Floor Plans - Pivot Homes

Quicksort is an in-place sorting algorithm. Developed by British computer scientist Tony Hoare in 1959 and published in 1961, it is still a commonly used algorithm for sorting. When implemented well, it can be somewhat faster than merge sort and about two or three times faster than heapsort. [contradictory]Quicksort is a divide-and-conquer algorithm. It works by selecting a 'pivot' element from ...

Quicksort - Wikipedia

Step 2 - Prepare Data for the Pivot Table. Now, we need to make little changes in our data to make it ready for a pivot table. If you look at the data we have got an extra column here with the name of the source file. Right click on this column and select Split Column -> By Delimiter. From delimiter window, select custom, add "-" as a delimiter, and select "Left-most delimiter ...

Create a Pivot Table using Multiple Excel Files (Workbooks)

After going 2-10 last season, the Lakers (12-3) have their most wins in nearly a decade and loom as a top contender in the Division 2 state tournament.

Winless in Patriot League play last year, Silver Lake boys ...

@Gecko I'm not sure what is the question. If you just use strsplit it creates a single vector with 2 values in each slot, so tstrsplit transposes it into 2 vectors with a single value in each. paste0 is just used in order to create the column names, it is not used on the values. On the LHS of the equation are the column names, on the RHS is the split + transpose operation on the column.

r - Split data frame string column into multiple columns ...

Toshiba also intends to lift shareholder returns to 300 billion yen (\$2.6 billion) over the next two years, up from an earlier target of 100 billion yen. Shares in the industrial conglomerate ...
